

What is WebTitan Cloud for WiFi?

WebTitan Cloud for WiFi is a cloud based content filtering solution for your WiFi environment. It provides a secure setting for WiFi guests to browse online by preventing exposure to inappropriate content and protecting the integrity of the network by blocking malware.

The solution enables the administrator to centrally control an infinite amount of WiFi access points, locations and traffic making the solution simple to manage and boundlessly scalable.

WebTitan Cloud for WiFi requires a simple DNS redirect to the WebTitan servers; making it simple to set up and eliminates latency.

The benefits of using WebTitan Cloud for WiFi to secure your WiFi Environment include:

Shared

WebTitan Cloud for WiFi is a multi-tenanted platform. You can create new accounts easily and manage any number of locations. You can also delegate administration, allowing others to dictate the policy for each WiFi access point. This can be set up in minutes and it is all managed from an intuitive web based interface. No local software installs required.

Simple & Immediate

WebTitan Cloud simplifies WiFi security management. It takes care of all the complexities of content filtering and security while presenting a logical interface that requires no training. It requires NO software installation and NO need for technical expertise to set up or manage customer accounts – it's that simple.

Standardized

Our many API's allows integration with existing systems such as billing, auto provisioning or monitoring system. Being able to standardise across these systems provides greater control and simplicity.

Secure

WebTitan Cloud for WiFi allows the administrator to secure the network by blocking malware and controlling the content users are allowed to access. Policies can be created per location preventing users from accessing unwanted content and blocking malicious websites. The administrator can find out exactly what content is being accessed via the WiFi network.

Our network of clients

WebTitan Cloud for WiFi clients consists of;

- » Service providers who wish to profitably offer content controlled WiFi as part of their product offering. WebTitan Cloud for WiFi is a robust low management solution that integrates easily with existing systems, offering the service provider the ability to supply an additional service that customers require at a very manageable cost.
- » Large institutions with multiple WiFi access points across various locations such as shopping malls, universities and airports. The solution facilitates simplicity on scale.
- » Small businesses that provide free WiFi who wish to protect their guests and network from inappropriate content and malware, guaranteeing brand protection.

Product features

Multi-tenanted solution

Support multiple WiFi access points and locations from one centralised platform. Each location has its own log in and policy manager. Each account administrator can control the content accessed for multiple locations.

Centralised administration

The administrator can manage all accounts centrally from the web based user interface. The centralised dashboard provides an overview of the system performance and activity.

Rebrandable/ white label

Rebrand the platform with your corporate logo and corporate colours to personalize the solution.

Reporting suite

Reports are available at a global level as well as at the account level. Browsing activity reports can be scheduled to run on a timed basis or can be run on demand and detail the sites that were allowed / blocked over a specific time period, requests by category, requests by domain and requests by IP. Real time browsing and search functionality are also available.

Extensive API

WebTitan Cloud for WiFi integrates with existing systems via API integration to allow the administrator to easily create new accounts, extract reporting information and interface with the existing management console.

Our cloud or yours

WebTitan Cloud for WiFi is deployed as a cloud based service and can be hosted in the TitanHQ cloud, as a dedicated private cloud, or in your own data center.

URL filtering

WebTitan Cloud for WiFi filters website URLs into 53 predefined categories such as social media, news, pornography, gambling etc. The system contains over 500 million website addresses in 200 languages, each sorted into the predefined categories. Combined with cloud based look up users get highly accurate and flexible filtering based on the website's content.

Malware & phishing protection

Protect the network from malware and phishing attacks with WebTitan's categories of malware protection. WebTitan will block access to compromised websites, malicious websites, spam based websites and spyware.

Flexible policy creation

Using WebTitan Cloud for WiFi you can easily delegate control of each location's policy. Policy can be altered to suit the needs for each location.

Policy exceptions (Cloud Keys)

WebTitan Cloud for WiFi allows the account administrator to create exceptions to the general internet policy. Known as Cloud Keys; they can be created instantly and allow the user to bypass a policy rule. Each Cloud Key can be created for single or multiple users and are controlled by time or date.

Ease of use

WebTitan Cloud for WiFi can be securely accessed online which allows each account administrator easy access to manage their policies and generate reports.
